## FOR IMMEDIATE RELEASE:

### CLEANING TECHNOLOGIES GROUP, LLC INTRODUCES NEW CLEANING SOLUTIONS AT CIMT 2019

Cleaning Technologies Group, a world leader in providing cleaning and waste minimization technologies, will introduce a host of advanced cleaning solutions at the China International Machine Tool Show (CIMT) in Beijing, China April 15 - 20, 2019. Visitors to Cleaning Technologies Group Booth #W3-B212 will be introduced to a number of new products, technologies and services. Among the new technologies exhibited at the show will be:

- **LeanJet RB-2 Aqueous Immersion Cleaning System** uses a patented washing and rinsing process of agitation, spray impingement, hydraulic purging through immersion and rotation, ultrasonics, and heated blow-off drying. The patented "triple action" batch cleaning process was specifically developed to process a broad range of challenging parts, especially those with internal bores, passages and complex geometries, making this system capable of meeting critical cleaning expectations.
- **CleanVeyor Ultrasonic** parts washer utilizes a combination of spray, immersion, and ultrasonic cleaning technologies and has proven successful in achieving Six Sigma consistency in a number of applications requiring high production outputs and tight cleanliness levels. Parts with complex and internal geometries that need final cleaning prior to assembly are ideal candidates. This cleaning process has proven to significantly reduce or eliminate warranty related failures that would be attributed to inadequate part cleaning. The CleanVeyor is modular so that more stages can be added as needed. For more information click [here](#)

At the CIMT 2019 show, we will have technical experts available to explain our technologies more in-depth and provide suggestions to our customers to improve their cleaning processes.
